1. The following is an examiner's statement of reasons for allowance: the closest prior art reference is CH 656478 A5. The examiner agrees with applicant's argument that prior art of record fails to show or fairly suggest an adjustable hinge having the combination as claimed including a first elongate member defining a keyway slot that extends from *one end* of the elongate member, a second member having a key member receivable in the slot, and the keyway slot and the key member being formed with *profiles* that enable the key to be received in the slot to a selected one of a plurality of depths. Further, there is no apparent reason to extend the slot in the middle section of the prior art of CH 656178 A5 to reach the invention as claimed. And the grub screw 22 in prior art '175 cannot be fairly considered as both the "profiles" and "stop means" to meet the claimed invention.

The examiner, however, disagrees with applicant's argument that there is no keying between the slot (30) and the key portion (6) of '178. "Keying" is a broad term that can be considered as a simple insertion of one part into a second part. As shown by the prior art, free end (6) is inserted (keying) into the slot (30) and locked by the screw. Therefore there is "keying" therebetween. Also the examiner would like to point out that the patentability is not relied upon the "keying" feature.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
